Summary

1 Introduction

- General stuff the documentary (director, broadcast)
- The film is a criticism of the IPCC and current global warming hysteria
- Attempts to prove the insignificance of CO₂ in the atmosphere
- Accuse the governments and the IPCC of killing development

2 Global Warming in the 21st Century

- Brief overview of how global warming/greenhouse gases work
- Radiation in gas molecules

3 Arguments Presented

- Attempts to provide arguments...

3.1 The Relevance of the Post Economic Boom

- Film shows the graph
- What was/is the post economic boom
- How has the film interpreted the graph/data
- What is the correct way of interpreting the data

3.2 Global Warming is Politics

- Film claims the global warming industry is political
- IPCC misrepresenting scientists
- Can't substantiate the claims made by the film

3.3 Temperature Leads CO₂

- Film claims that T leads CO₂, not the other way around
- Shows famous graph

- How the film interprets the data
- The correct way of interpreting the graph
- Scientist explanation of graph

3.4 The Insignificance of CO_2

- Film claims CO_2 is not major factor in greenhouse gases
- Ocean is much more significant
- Sun (and sun spots) actually changes the temperature
- Environment needs equilibrium
- Simply wrong

4 Solution Presented

- Film says funding for global warming research should be ceased
- Also that people should stop caring and doing things to stop it
- Simply wrong, based on the facts. The solution doesn't stand up
- Best course of action is to keep researching in the global warming field and to work together to create a cleaner society.

5 Conclusion

- The film fails to provide concrete evidence to support their claims and solutions
- The science seems to have been altered to provide seemingly convincing evidence to those not versed in the global warming field
- A piece of propaganda
